Web Development Test Cases

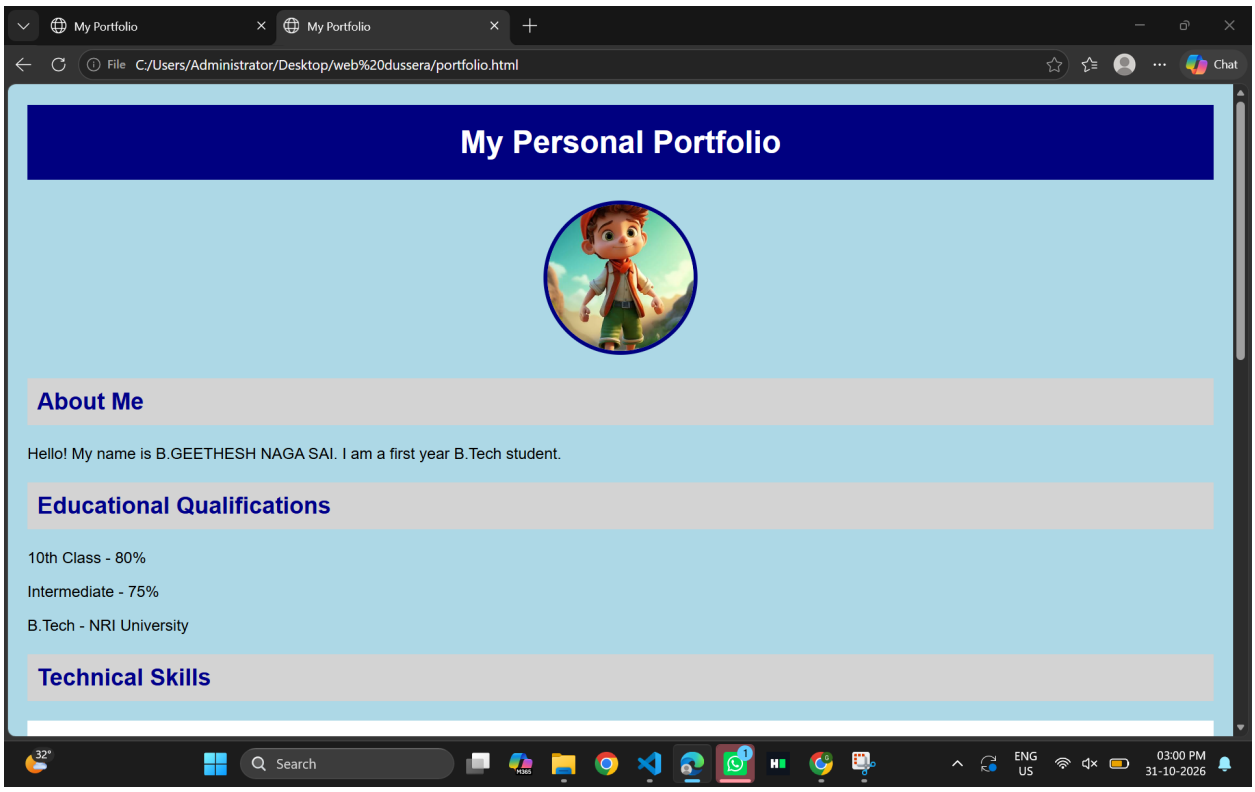

Introduction

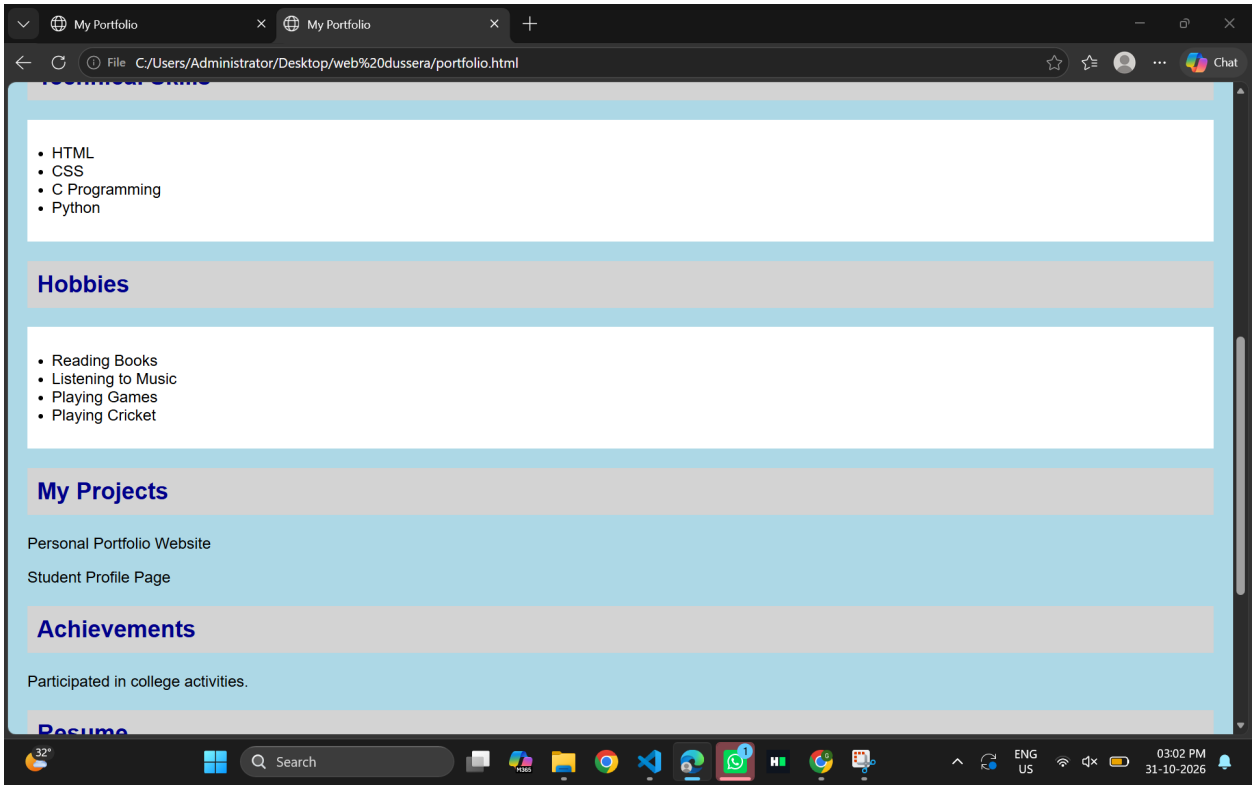

This document presents the output screenshots of three web pages created using HTML and CSS and tested in a web browser. The pages are a personal portfolio website, a college information and admissions website, and a user registration and login interface. Each section below gives a short explanation of the page and the screenshots captured while testing it.

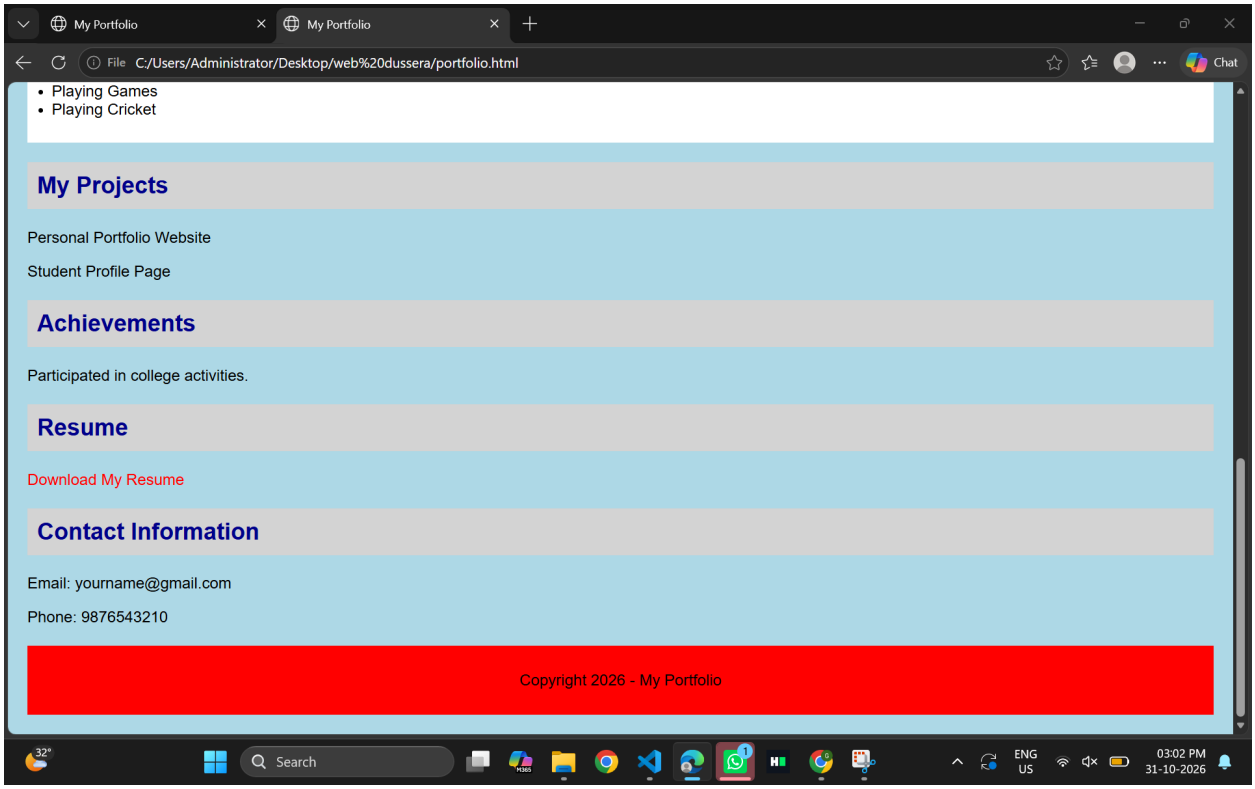

Testcase 1: My Personal Portfolio Website

Explanation

The portfolio page introduces the student in a single scrolling layout. It has a dark blue header banner, a circular profile picture, and a light blue background. Each topic sits under a grey heading bar: About Me, Educational Qualifications, Technical Skills (HTML, CSS, C Programming and Python), Hobbies, My Projects, Achievements, Resume and Contact Information. The skills and hobbies are shown as bulleted lists, the resume is offered as a download link, and a red footer closes the page.

College Information and Admissions Website

Explanation

This page presents ABC Engineering College. A navy header carries the college name, followed by a black navigation bar with the links Home, About, Departments, Admissions, Facilities and Contact. The content sections cover the college introduction, the departments (Computer Science, Electronics and Communication, Electrical and Mechanical Engineering), courses offered (B.Tech, M.Tech and MBA), faculty details, admission information, campus facilities, college events and contact details. A green footer ends the page.

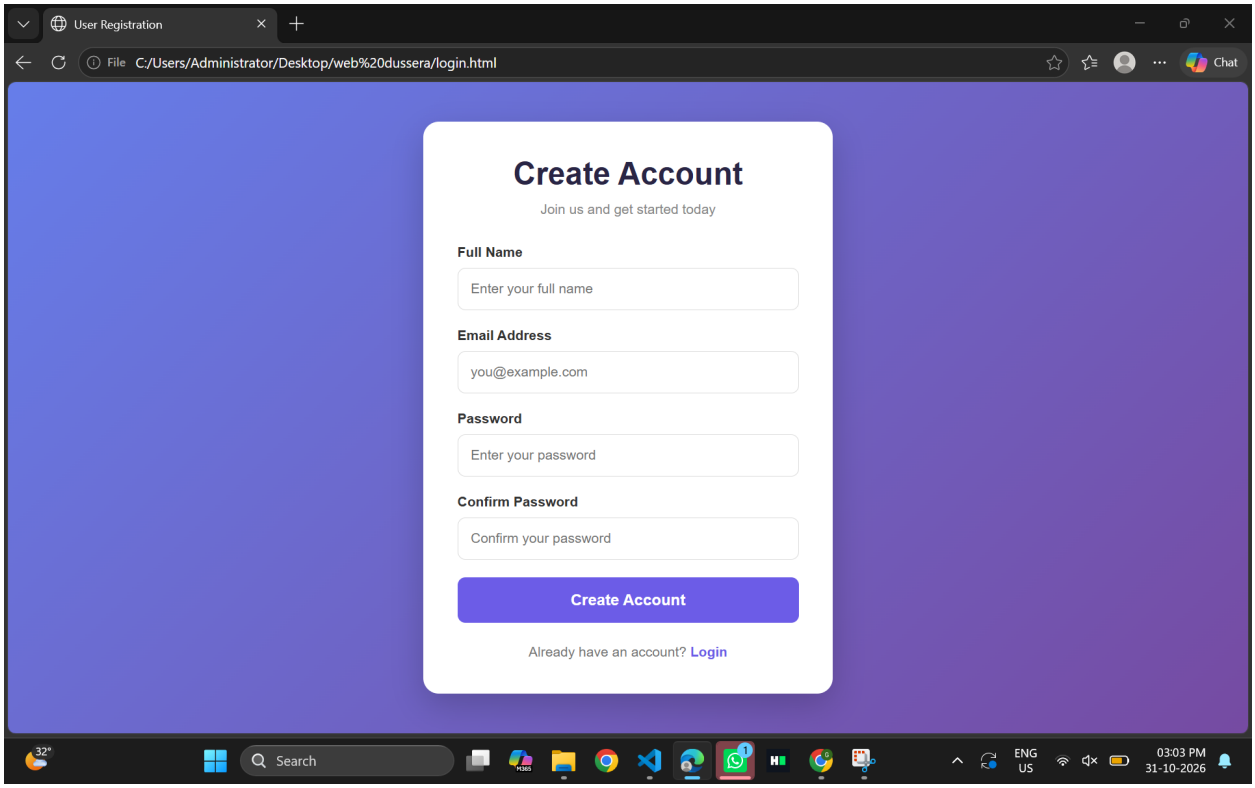

User Registration and Login Interface

Explanation

The registration page shows a centred white card on a blue-to-purple gradient background. The card contains a "Create Account" heading and input fields for Full Name, Email Address, Password and Confirm Password, each with placeholder text. A "Create Account" button submits the form, and an "Already have an account? Login" link lets existing users move to the login page.

Conclusion

All three pages loaded correctly in the browser and displayed their headings, lists, navigation, forms and footers as designed. The portfolio and college pages show how HTML structure and CSS colours can organise information clearly, and the registration page shows a clean, user-friendly form layout. Together they demonstrate the basic skills of building and styling web pages.
